**SYLLABUS
OF
B.A./B.Sc. ANTHROPOLOGY
(ANNUAL PROGRAMME)
2023**

**Approved by Central Board of Studies in Anthropology
(Dated : 22.02.2023)**

Dr. P. S. Narayan

Preamble

The learning outcomes-based curriculum framework for a B.Sc. degree in Anthropology aims for a comprehensive and an integrated framework for understanding of human beings and humanities and its adaptabilities across time and space dimensions. It deals with all kinds of communities including tribal, rural as well as urban societies. The curriculum is a broad framework which exposes the students to this diversity and to help them understand the challenges, best practices as well as biological and cultural adaptive features of communities that have evolved in the process of adaptations and acclimatization.

Anthropology as a discipline is oriented towards a holistic and relativistic understanding of humanity from both biology and cultural perspectives on one hand and from distant past to the present and also future possibilities. As a discipline, it is divided into three sub-branches viz., biological anthropology, social/cultural anthropology and pre-historical archaeology, which aims to study the three facets of human beings i.e. biological, cultural and pre- historical. Thus it brings together perceptives drawn from natural sciences, social sciences and the humanities. As Eric Wolf puts it, "anthropology is the most scientific of humanities and the most humane of the sciences.

A Bachelors of Science (Honors) Program in anthropology covers all the three branches of anthropology as mentioned above as well as study of courses which draws in perspectives from other allied subjects. The courses in economic environmental, molecular, medical, genetics and development anthropologies draws in the perspectives of these disciplines to the understanding of anthropological issues and problems. The curriculum is designed to expose the students to deal with real life empirical problems through case studies as well as first hand understanding through fieldwork.

Graduate Attributes in Subject

Some of the characteristic attributes of a graduate in anthropology may include the following
Disciplinary knowledge and skills: ability to understand key concepts used in the study of a society, culture and various biological aspects of human beings ; understanding of various theories of society, culture, evolution, genetics and prehistoric archaeology. The students will also have some understandings of other related areas of interdisciplinary studies like social and life sciences, environmental studies and humanities.

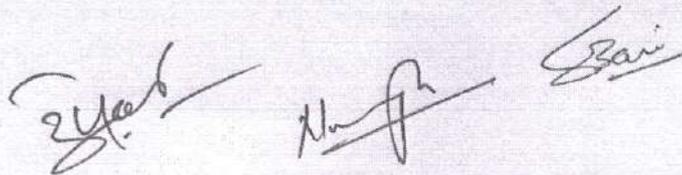

Communication Skills : To develop ability to communicate and express their ideas clearly and cogently both verbally as well in writing.

Critical thinking : To develop ability to think critically and understand the pros as well as criticisms relating to the key ideas and theoretical debates in anthropology. To be able to argue logically and support ones view point citing relevant data.

Problem solving : Capacity to apply the knowledge one has learned to solve problems of real life situations.

Analytical reasoning : The skill to sift through mass of data and to identify what is relevant data relating to the problem under study; ability to judge others arguments and point out the logical flaws and contradictions if any.

Research-related skills : Ability to formulate a problem, and undertake a systematic and scientific

enquiry about it, which include the skill to generate hypotheses, prepare relevant questionnaire and schedules and apply them; ability to interpret the data, find out the relevant cause and effect relationship and based on finding draw the logical conclusions from the data Cooperation/Team work: Ability to work in a team and show the ability to cooperate with others, divide the work and work cohesively as a unit .

Cultural Relativism : Ability to appreciate the cultural backgrounds of others and appreciate the differences and put at back ones ethno-centricism and biases.

Scientific Temperament : The candidate must develop a scientific temperament and be sufficiently interested and inquisitive in things happening around them. They should have the ability to observe systematically, raise questions and search for answers.
